Commissioner under the orders of the Dewan
in charge

29 The joint note of the Sanitary Commissioner

and the Chief Engineer is enclosed They
recommend (1) that it is desirable that the
Bany Mills should deal with their industrial
waste water (2) that a settling tank
will be sufficient to deal with the city
sewage (3) that the problem of malaria
prevalent at Kumbhatore could only be attacked
by effective sub soil drainage & also not when
connected with the waste water of other
city or the mills

30 The only point for consideration in regard
to the mill water is that the authorities
should be requested to take steps to render
their waste water innocuous promptly
& that the existing conditions should not be

of 1926

Returned, with compliments, to the Chief
Secretary to Government

2. 45 I have inspected the Kempapur Agrahara ground
in company with the Executive Engineer, Sanitary and
Town Planning Division

3. 46 The report submitted by Mr Marker (copy
enclosed) explains the situation.

4. 50 The proposal of the Mills to erect purification
works and of the City Municipality to have
settling tanks for treatment of trade waste and
sewage respectively, ~~will purify~~ will purify the
trade waste and sewage sufficiently to permit their
application to land. The effluent so obtained will
be readily applied to land directly, for cultivation
and used up, and there will be no smell or nuisance
and contamination of wells and subsoil water will
be avoided. The deep earthen drains already existing
which drain subsoil water will drain off any surplus
water from the gardens and subsoil.

5. 51 As a further improvement, the pits where
the sewage is collected and pools are formed near
the Railway lines in the vicinity of the Mill should
be filled up and the ground levelled up and cultivation
on this portion should not be permitted. If
the purified sewage is applied properly on the land
by dividing it into plots with proper earthen drain
and not at random with pits here and there, there
will be a marked effect both in the appearance and
the sanitation of the place.

G R S 12]

General and Revenue
SecretariatSerial
No

File No 7 of 1926

6. 52 The Binny Mills and the City Municipality may both be asked to immediately proceed with their purification works.

53 There is no need of putting any subsoil drains ~~has~~ as the existing deep earthen channel is already serving this purpose.

7. 54 The plan and estimate prepared by the Municipality for the disposal of the sewage of the Arlepet drainage are not accompanied with report. It is not seen how the size of the septic tank has been fixed and how many hours' discharge the septic tank is proposed to contain. Supposing that all these have been done satisfactorily, alterations in the design of the septic tank as per accompanying plan would be advisable. Instead of having a single tank of 50' x 20' as proposed by the Municipality, 3 tanks side by side of dimensions 30' x 12' and of the same depth would be ^{more} satisfactory. The arrangement for the flow of sewage through the tanks would be as indicated in the plan. This has not only the advantage of better treatment of sewage through a longer course but will facilitate the clearing of any compartment and ~~be~~ leaving the other two undisturbed.

55 As more of the area in Arlepet gets proper drainage system and more sewage has to be treated, additional tanks might be added on either side with little extra cost. If in future the tanks are proposed to be covered, this can be done at a comparative

Letter No 35 dated the 18th July 1927 from the
Executive Engineer, Sanitary and Town Planning Division, to
the Chief Engineer of Mysore.

Re sewage of Binny Mills

With reference to our joint inspection of Kempapur
Agrahar grounds, I have the honour to state that the nuisance
to the village of the obnoxious smell, contamination of wells
and high level of subsoil water is due mainly to this reason
The trade waste from the Mills being crude and harmful to
vegetation is allowed to flow through winding channels in the
valley and no part of it being used up directly on any land
This is further augmented by the sewage when the fields adjoin
ing the railway line take the necessary amount and the perco-
lation water from these fields through the deep channels - -
running across them This combined sewage in its lower course,
though not applied to the lands directly is stopped in its
course at intervals and pits are formed near it and the per-
colation water is collected and used on land This continues
for the full length of the channel at the northern end of the
village and the whole residue of the sewage stagnates in a
shallow basin without any outlet This naturally is a nuisance
and needs immediate attention

The remedy proposed of treating the trade waste of
the Mill and also of the sewage will be effective immediately
The treated effluents will have lost much of the obnoxiousness
of smell and injurious effect to cultivation The effluent
so obtained will all be greedily applied to land directly
for cultivation and used up and thus nuisance of smell and
contamination of wells and subsoil water will be avoided.

The

The deep earthen drains already existing which drain subsoil water will drain off any surplus water from the garden and the subsoil

As a further improvement the pits where the sewage is collected and pools are formed near the railway lines in the vicinity of the Mill should be filled up and the ground nicely levelled up and cultivation on this portion should be stopped also. This will remove the signs of insanitation and unhealthiness just at the entrance to the town from the Mysore side by train. If the purified sewage is applied properly on the land by dividing them into plots with proper earthen drains and not at random with pits here and there, there will be a marked effect both on the appearance and the sanitation of the place.

The Ginny Mills and the Municipality may be asked to immediately proceed with their purification works.

There is no need of putting any subsoil drains, as the existing deep earthen channel inspected is already serving this purpose

My dear Sir,

I beg to inform you that awards in the acquisition cases for widening the Sri Narasimharaja Road in front of the Metal and Silk Factories will be pronounced on the 24th instant. Further action will be taken forthwith for widening the road.

2 The President, Health Officer and myself inspected the Binny Mill Tank and its surroundings. We traversed the contour of the tank and inspected the garden lands below the Railway Line. The effluents coming out of the Mill premises and their stagnation near the waste weir and below is the cause of noxious smell in that locality. The Municipality has made certain proposals to Government.

A-

There is very poor knowledge of hygiene in Indian cities. It is our responsibility to improve the sanitary conditions of our cities.

CHIEF SECRETARY
21 SEP 1927

Just this
20 9 27
Secretary to Government,
P. W. Department.

Bangalore,
September 1927.

V.V.S.

*question of negotiation
pegging
must have
sufficient
back ground
behind it*

If the above suggestion may be
communicated to the Public for necessary
action. The construction of a pipe line,
has already been sanctioned and the Public
have agreed to contribute $\frac{1}{2}$ of its cost.
The Marker's plan is not resumed but from
the above note, it is clear that the change
of design is not likely to increase the
cost materially.

If the question has been pending for a
long time and now that a final decision
is reached, perhaps the quickest way of
giving effect to it would be to ask the
Municipality to get the work done in
direct consultation with the Public or to
submit it to the Sanitary Board.

CHIEF SECRETARY
NOTED 23 OCT 1927

May I take the liberty of forwarding the enclosed petition from the inhabitants of Kamapapura Agrahar direct to you instead of sending it through the usual channels?

I see from the enclosure that orders were given in January 1926 for the abatement of the nuisance caused by the sewage coming out of the Binny Mills, but fear they have either not been carried out or have failed in their object because I never travel by train to or from Bangalore without being acutely conscious of the smell caused by this particular outflow of sewage. I don't think it ought to be difficult to devise a scheme of septic or settling tanks and sewage farm arrangements which would dispose of the sewage without offence and I think, that, if the Agricultural Department were consulted, they ought to be able to show us some means of making such a scheme pay at least part of its way

I feel sure that the matter has only to be brought

30

brought to your notice to ensure the statement of
the witnesses.

Yours sincerely,

John W. Davis

PETITIONERS -

The Garden land holders of Agrahar

Near the Binny Mills, Bangalore,

And Others

Respected Sir,

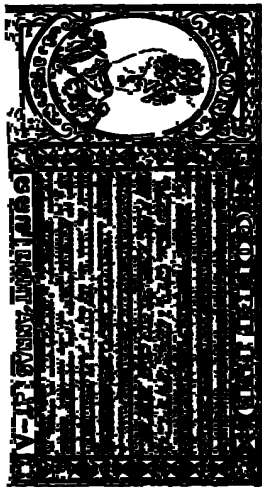

We, the abovenamed Petitioners, most respectfully
beg to submit as follows -

1 That we are holders of lands in Agrahara lying to the west of the Binny Mills, Bangalore, and have been using the Sewage water of Bangalore City, which runs through our lands, to the best advantage of our lands, for the past 20 to 30 years, and have, besides, expended considerable amounts towards bringing the lands to a cultivable condition and making them even by filling pits, etc Thus the Sewage water has stood us in good stead by making our lands very fertile

2 That, recently, i.e., for the past about 4 or 5 years, the colour-water of the Dye-room, Binny Mills, is made to flow on our lands, side by side with the Sewage water, and we have let it pass by without using the same.

The result of the said colour-water flowing on the lands is that, obnoxious odours emitting out of same have driven others to petition the Municipal Authorities requesting that the Dye-house water might not be allowed to flow near our Agrahara as it caused ill-health to us, and we had

4

also requested in the same petition that since water convenience was not available hard by the same might be afforded to us by the help of Taps installed in our locality

3 We now beg to submit that the said matters can be right if the Mill Authorities take it into their head -- which they have actually proposed to do -- to buy one Venkatar land with a view to construct a big reservoir to collect the colour-water therein and purify it and redirect the thus purified water to their own Mill Tank By this method, we are sure that affairs can be brought back to the old order as they were before the Dye-house water was passed through the lands, and will also guard our interests besides leaving the others all in a sound condition

4 Such being the case some residents of our Agrahar, who are irimically disposed towards us and who possess lands the further west have since petitioned Your Honour that the sewage water might be conducted further down to the West as it was causing ill-health to them

5 In this connection, we beg to point out to Your Honour the fact that our opponent-petitioners, having grown jealous of our having derived the greatest advantage to our lands with help of the sewage water have submitted the above petition with a view to deprive us of the benefit thereof, and otherwise us by conducting away the Sewage water down to the further west, which would, on the other hand certainly prove of imm utility to their own lands This in fact and in short is their malicious intention in submitting their petition referred to above

6 One more point may not be out of place here About 10 or 12 years ago, when auctions used to be held for the water the Opponent-Petitioners have on several occasions entered into the auction sale and unnecessarily raised the price to an abnormal extent if they did like this

* the regime of the then Municipal Commissioner, Mr B S Han-
ji Rao, the latter Officer was kind enough to direct that -
they ought not to enter into the auction for this line since
their lands lie farther down to the west Being thus dis-
comfited in their attempts to cause us trouble and loss they
have however, since been submitting petitions after petitions
to conduct away the Sewage water further down on the fragile
excuse that it has caused them ill-health

7 We now beg to submit that till recently tenders
used to be called for by Contractors for the Sewage water
But since last year no tenders have been called in being
evidently the result of the petitions submitted by our
opponent-petitioners We therefore strongly apprehend
and reasonably too that we will all be ruined by this mea-
sure Hence we submitted a petition to the Municipal Com-
missioner in May 1925 for which we received an Endorsement
which was none to our benefit Then we again submitted
another Petition (copy of which is enclosed herein) setting
out in detail our grievances, which petition has been dated
19-6-25 and has not been fortunate enough to elicit any re-
ponse till now

WHEREFORE we all most humbly and respectfully
pray that Your Honour might be graciously pleased to direct
(a) that the Sewage water might not be conducted away further
down and (b) that Tenders might once again be called for -
from us for the same as it was hitherto the case which will
not only improve the finances of the State but will save us
also from misery starvation and ruin

OR IN THE ALTERNATIVE if that is not possible
we beg that convenience might be given to us by laying on of
big clay pipes to draw the Sewage water to our lands and re-
tilise them, even as it has been and is being done in the
case of the Sewage water running from Sultanpet to the ur

५

Farm, for which we are prepared to pay a lease of Rs 100/-
per annum We are, besides, ready and willing to abide
by any other reasonable conditions imposed on us in this
behalf, provided our prayer is granted and we be saved

Hoping that our humble prayer will be granted,
and praying the Almighty for Your Honour's long life and
perpetual prosperity,

B A N G A L O R E, |
4th September 1926 |

We all beg to remain,

To

The Commissioner of the City Municipality,
BANGALORE CITY

S i r,

The undersigned beg to state as follows:-

1 That they are the owners and cultivators of vegetable and flower garden lands situated to the west of the Binny Mills and separated therefrom by - the Bangalore to Mysore Railway line

2 Formerly these lands were dry ~~land~~ lands and dry crops were being grown thereon

3 Subsequently since the last 25 to 30 years ever since the Municipality allowed the City Sewage water that side they vastly improved the said lands depending upon the permanent supply of the said water and converted them into vegetable and flower garden lands Since the Sewage water is the - best manure for the English vegetables mostly English vegetables are being grown there with the assistance of this water

4 For nearly 15 years, the undersigned had been taking from the City Municipality yearly lease of water at auctions held for the purpose and latterly for the last 10 years on tenders called for the purpose

purpose. Prior to these auctions and tenders, they were using the said water with the permission of the Municipality. Thus for the last nearly 25 to 30 years the undersigned and their predecessors have been in uninterrupted and peaceful enjoyment of the said privileges and depending upon this permanent supply of sewage water have vastly improved the said lands making them specially adapted for growing English vegetables.

5 This year in the middle of May the undersigned were anxiously waiting for the usual notices for tenders being sent to them by the Municipality as was being done in the previous years. When they did not receive the notices, one of the undersigned on behalf of himself and others made an application to the Municipality dated the 18th May 1925 and has received an Endorsement dated the 29th May 1925 to the effect that the said sewage water near the Bangalore Binny Mills - would not be given on lease hereafter.

6 The vegetable crop is one that is being constantly grown throughout the year irrespective of seasons and rains.

7 The Endorsement above referred to has come to them with great surprise and they were not and are still not prepared to such a contingency.

8 The English and other vegetables take at least 5 months time to become marketable crop and flower plants last from 10 to 15 years, and the undersigned depending

-- 3 --

depending upon this water had commenced nursing fresh vegetable and flower plants before they got the Endorsement under reference

9 Previous to the said Endorsement the undersigned had no notice of any sort of the Municipality's refusal to further lease of water

10 The fresh plants that are under growth have cost the undersigned a good deal and the loss they suffer by the failure of these crops for want of Sewage water would amount to more than Rs 10,000/-

11 Depending upon this water, not only for manure, but also for the usual source of water supply to their lands, the undersigned have not opened any wells in the locality at all except 1 or 2 old wells. The water in these wells are at a great depth and even if new wells are opened they have to be done at a very great cost and require several months to finish them

12 Further, they learn that because of the insanitary condition of the Jodi Kempapura Agrahar owing to the Sewage water the Municipality has refused them further lease with a view to take this water further west and leave it flow there

13 If this is the only objection to the Municipality allowing them the use of water the undersigned beg to submit that there have been no complaints of ill-health in that locality prior to 3 or 4 years. And only for the last 3 to 4 years ever since the Binny Mills

-- 4 --

Mills are allowing their waste and decoloring water and matter in the same channel and which is the main cause of ill-health in that locality, there has been some room for complaint. If the Binny Mills make their own arrangements to take out their water by separate channel there would be no room for any complaints of ill-health.

14 Further, most of the people of the above Agrahar who have been -- as these are informed -- making petitions that their locality has been affected by the said water going there, do not own any lands or houses near enough to be affected thereby, and to make use of this sewage water. They own lands near about the place where it is now proposed to lead the water. Their complaints are only of recent origin and this may be verified by a reference to the Municipal Registers and are not bonafide and are only done out of malice and with self-serving interests, namely to get the use of this water which is the best manure for their own lands further down.

15 The undersigned also submit that it has been a source of Revenue to the Municipality and none have suffered by the existing state of things.

16 The undersigned are ready and prepared to take a permanent future lease at a fixed sum of Rs 100/- per annum.

17 For the foregoing reasons, they pray

(a) that the tender may be taken from them as usual and they be allowed the use of water as previously

previously,

(b) to direct the Binny Mills to make arrangements for taking their water outside by separate drain without affecting the locality in its health

or

(c) to deal with the water just as being done in Sunkal Farm and make it convenient for these people to bale out water for ~~hit~~ their lands or

(d) if those are not feasible at least to give the lease of water for a year with notice that further leases would not be given, to enable them to make necessary arrangements for supply of water to their lands in future and to avert heavy loss

and

(e) failing which the undersigned feel constrained to claim from the Municipality damages to the extent of Rs 10,000/- as mentioned above

18 The undersigned would be highly favoured if the Health Officer is requested to inspect the locality and make a report whether ill-health complained of is due to Sewage water or the waste water from the Mills

19 ~~XXXXXXXXXXXXXXXXXXXXXXXXXXXX~~ Further, they would request the members of Council to visit the place and thereafter have the subject discussed in Council meeting before any further and final steps are taken in the matter

20 As the close of the current month is fast approaching

-- 6 --

approaching by which their yearly lease would terminate, the undersigned pray that, pending the final decision of the Council, they may be allowed to use the water.

We beg to remain,

Sir,

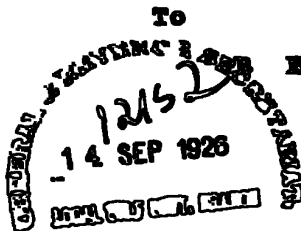

Your most obedient servant,

To Amm-ul-Mulk
Mirza Asif Ali Khan, Esq. C I E, O B E,
Dewan of Mysore, Bangalore

Most Honourable Sir.

We the inhabitants of Kumpapur
Agrahar have the villages situated on
the side of the Bonny Mills Bangalore city most
humbly and longingly beg to place the following
grievances for your honour's kind and sympathetic
consideration and early favourable orders —

The Municipal main drain that is passing
through our villages carrying all the accumulated
drain water from the Bangalore city and the
poisonous water from the Bonny Mills is causing
the villages most unhealthy and miserable.

We have been representing this fact for
the year 1920 through the Government of His Highness
the Maharaja of Mysore was pleased to issue an order
some six months back (copy enclosed) for removal
the hardship nothing has been done in the matter
yet by the Municipal authorities.

We earnestly pray that your honour
will at least be pleased to come to our aid
and thus help us from pain by giving us health
and happiness.

For which act of benevolent charity on
your honour's part we shall ever remain grateful.

We beg to remain

Most Honourable Sir
your most obedient & humble servant

Bangalore
7th August 1926

Copy

D O No 179

Bangalore,

19th July 1926

Dear Mr Keshava Iyengar,

In inviting your kind attention to G O No L 5032-4/Ml 12-24-107 dated the 12th January 1926 sanctioning the laying of a pipe line to carry fa off the combined Municipal and industrial sewage passing by the side of Kempapur Agrahar and Hosahalli villages and also directing that steps be taken for the prevention of the use of sewage water for cultivation under the Agrahar tank and for affording water-supply to the two villages, I am desired by the Dewan to enquire what action has been taken so far to give effect to the order

The inhabitants of the villages are frequently appearing before the Dewan and representing that nothing has been done so far in the matter The Dewan will be glad if you will kindly see that the question is taken up vigorously and early relief granted to the people

Yours sincerely,

Sd M S Ramachandra Rao

-- copy --

19
D O 7 of 26-27

City Municipal Office,
Bangalore, 19th July 1926

My dear Mr Ramachandra Rao,

I am in receipt of your letter of even date regarding the laying of a pipe line to carry off the combined Municipal and industrial sewage passing by the side of Kempapur Agrahar and Hosahalli villages. In reply, I have to state that two-thirds of the cost of the scheme has to come from the Bangalore Woollen, Cotton and Silk Mills, Co , Ltd , and although they were requested to deposit their quota of the cost of the scheme, they wrote to say that the amount would be paid after the work was completed. There was not sufficient Budget provision for carrying out the work wholly out of Municipal funds in the first instance and then recover the cost from them. As the major portion of the funds have to be paid by the mills, the work could not be taken up at once and completed. The matter is under further correspondence with the Mill authorities concerned with a view to obtain the quota due from them early.

Further action will be taken as speedily as possible

Yours sincerely,
Sd Keshava Iyengar,

20

D O 638

Bangalore, Sept 9, 1926

Dear Mr Kesaviengar,

Please refer to your letter No 7 of 26-27 dated the 19th July 1926

I am desired to request you to kindly let me know for the information of the Dewan, why no action has yet been taken about the disposal of the sewage of the Binny Mills near Kempapur Agrahar and Hosahalli Villages?

In this connection, I am to enquire whether it is not possible to arrange to have a septic tank, on the model of the one constructed in the Indian Institute of Science, to deal with the sewage

Yours sincerely,

Sd M S Ramachandra Rao

-- copy --

21

D O No 54

City Municipal Office,
Bangalore, 14th September 1926

Dear Mr Ramchandra Rao,

With reference to your D O letter No 638 dated 9th instant, enquiring why no action has been taken about the disposal of the sewage of the Birny Mills near Kempapur Agrahar and Hosahally villages, I write to inform you that I am in active correspondence with the mill authorities in the matter I have sent to them necessary plans and estimate and requested them to deposit 2/3 of the cost of the scheme estimated at about Rs 10,000 which they have not done yet Enclosed is a copy of their letter dated 8th instant, from which it will be seen that the mill authorities are raising some difficulties in the matter and before I give them the required assurance, I shall have to carefully discuss the matter with the Municipal Engineer and consult the Council

As regards the construction of a septic tank suggested in para 3 of your letter under reply, I shall have that matter investigated very early

Yours sincerely,

Sd B T Keshava Iyengar

-- copy --

Copy of letter dated 8th September 1926 from Messrs
The Bangalore Woollen, Cotton and Silk Mills, Company, Ltd
Bangalore

Sewer pipe line through Kempapur village

We have the honour to acknowledge receipt of your letter of the 4th instant enclosing plans of the proposed extension to your sewer pipe line for which we thank you. We find that the sullage will be conducted into the same nullah as the present discharge eventually follows when it has passed round Agrahar Village, and we shall be pleased to know what steps you propose to take in order to overcome any objections that may be raised by the riots who own lands beyond the proposed new outlet. We wish our position to be clearly defined as we do not care to join in any project that will be likely to give us trouble at a future date. If you can promise us that you are prepared to accept full responsibility for the discharge of our waste^{waste} and your sullage into the nullah you have indicated, we shall be very pleased if you will confirm this. Kindly let us have your assurance on this point before anything further is done.

15/9/26

5. No. 7088
Sec. two

105JA

From

B. T. KESAVAIENGAR, Esq.,

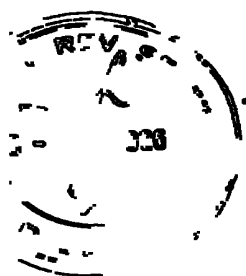

MUNICIPAL COMMISSIONER, CITY M.C.

BANGALORE CITY

CITY MUNICIPAL OFFICE.

Bangalore City, Dated 12th NOVEMBER 26.

23

To

C. Ranganatha Rao Sahab, Esq., B.A., B.L.,
Secretary to the Government of
His Highness the Maharaja of Mysore,
Development Departments, Bangalore.

SIR,

ml 7-26-57

3/4/26 With reference to your letter No. C. 2/ML. 7-26 dated --
14th October 1926, calling for an immediate report on the --
action taken in the matter of the disposal of the sewage of
the Binny Mills near Kempapur Agrahar and Hosahally villages,
I have the honor to state that the Mill authorities have --
written to me to say that they are taking up a big scheme to
treat the dye-wash water by a system of filtration for which
they have got plans ready. They suggested that expenditure on
our scheme might be deferred till the result of their own --
scheme was judged. Their scheme had been held up on account
of some trouble in connection with the purchase of land requir-
ed for putting up the filtration plant. I had sent for the --
ryots concerned, belonging to Kempapur and Hosahally villages
and advised them to close with the offer made by the Mill --
authorities. A settlement was effected about a fortnight ago
and the required land has now been obtained by the Mill autho-
rities. Every thing, ~~therefore~~ is now complete for the Mill autho-
rities carrying out their scheme. It appears to be an elabo-
rate and costly scheme and one that will effectively deal with
the Mill effluent.

2. As regards our minor scheme for laying the pipe line
the subsequent correspondence of the Mill authorities shows -
how it does not satisfactorily solve the difficulty and how :

is likely to transfer the evil from one area to another. If the scheme is carried out, the Mill authorities may not agree to minimise the nuisance likely to arise further down the channel beyond Kempapur village. The Hosahalli people would then begin to complain of the evil as they are even now doing and with great justification. I have inspected throughout its length the feeder channel carrying the sewage and sullage of the Municipality, as well as the Mills and I find that the coloured effluent from the Mills loses none of its colouration or effect thereof by passing through an earthen channel. When this is the leading of this sewage through a pipe line will only carry on the coloured matter undiluted to the Hosahalli tank, an effect which is bitterly complained of. In order to effectively prevent the nuisance, some filtration arrangement will have to be made at the end of the proposed pipe line to prevent the carriage of unfiltered sullage and sewage lower down the channel. Whether or not this will be necessary will depend on the sort of waste water that goes into the pipe line when the scheme of the Mill authorities is complete. It seems to me that a thorough re-examination of the question by the Sanitary Commissioner and the Chief Engineer is necessary before we send a final reply to the Mill authorities. The latter have committed themselves to pay 2/3 of the cost of the present scheme and will pay the balance when called upon to do so, but they say they are not prepared to pay any thing more.

3. I enclose for the information of the Government, copies of the correspondence that has taken place between me and the Director of the Mill subsequent to my D.O. letter dated 1 September 1936 to the Mill Private Secretary to the Dewan. I enclose also a memo of my inspection of the legality in connection with the Special Engineer, Mr. T. Ramachandra Rao and the Mill Officer.

I have the honour to be,

Sir,

Your most obedient servant,

Forwarded with compliments,

Honorary President.

Municipal Commissioner.

Commissioner's note of inspection 21-10-1926.

The undersigned accompanied by the Health Officer and the Special Engineer inspected the Kempapur Agrahar village, lands round it, and the Nala through which the City sewage and the industrial waste liquid of the Binny Mills is flowing, ultimately reaching Hosahalli tank.

2. We met the Mill Engineer who roughly explained the scheme contemplated by them for installing a sewage filtration and purification plan for treating both their sewage from the latrines and the industrial waste liquid, and pumping the purified effluent back into the Agrahara tank. The site they have acquired for the purpose was also shown to us. The Mill Engineer suggested that if we want more detailed information and plans, we might address the Director, Binny Mills. The scheme proposed by them, from the rough details furnished by the Mill Engineer, is to intercept all their waste liquid and sewage from flowing into the lands round Agrahar village, and loading it back into the Agrahar tank after an elaborate and costly process of purification. This seems a complete and ideal method of dealing with the mill sewage and ought to be encouraged.

3. The scheme proposed by the Municipality is to lead through pipe sewers the city sewage and the industrial waste liquid of the mills from the point where they are now discharging to a point beyond the Agrahar village and leaving it to flow in the existing earthen channel - which forms the feeder of the Hosahalli tank. This scheme after all tends only to alleviate the sufferings of the Kempapur village by preventing sewage contamination within its area, but perhaps shifting it to a point nearer Hosahalli village. In spite of the mill authorities treating their industrial waste liquid chemically and discharging it into the pipe sewer they seem to doubt whether the scheme will finally stop the ~~nuisance~~ nuisance in a way agreeable to the Hosahalli ~~people~~ people and whether the mill authorities may not be again approached to pay any more towards further improvements. This information they seek, perhaps, before they decide upon launching their independent scheme of installing their filtration and puri-

purification plant, because the Municipal scheme would cost them considerably less than their independent scheme.

4. To decide upon the various technical points raised above, it seems necessary to invite the ~~and~~ opinion of the Chief Engineer and the Sanitary Commissioner.

Sewer Pipe Line Through Kemmuru Village.

We have the honor to refer to one or two matters which we had the pleasure of discussing with you this morning when you called here. In the first place we understand that you are somewhat doubtful whether the extension of the sewer pipe as first [] proposed will effectively prevent further complaints by land owners round about the discharge end of it, no matter how far the pipe is led across country. This of course is an important point as any money spent on the extension would be wasted if the existing trouble were transferred to some other locality. We mentioned that we had already a scheme on foot for the treatment and filtration of our mill effluent, and before going ahead we are now only waiting for the completion of the purchase of the necessary land, which unfortunately the owners are inclined to profiteer over. We are hoping these men will be more reasonably disposed, as we are quite prepared to give them a fair price for their land - much more in fact than they would ever be likely to get if -- the land were acquired on our behalf. As soon as the necessary space is available and the plans of the lay out completely settled, we intend to proceed with the erection of this filtration plant. This you will understand is quite apart from any question of the extension of your sewer pipe, but it would probably be more economical for both of us to see the result of our filtration scheme before doing anything further about the pipe line. We understand from what you said that you favour this idea and are inclined to keep the proposed extension in abeyance meantime.

2. Copy of letter No. 1024 dated 21st September 1936, from

Ltd, Bangalore City

Re Sewage Pipe Line from Kempapur Village

I have the honor to acknowledge with thanks, your letter the 17th September 1926. The doubt expressed by me was as suit of a discussion that I had with some of the ryots there subsequently with your Engineer. The matter however requires be gone into by the Sanitary and Engineering departments before the existing proposals are reconsidered or referred and I do not commit myself to any view before consulting the authority concerned.

2. The other matter referred to in your letter regarding the arrangements you propose to undertake independently of joint scheme will be brought to the notice of the authorities concerned and a reply sent as to the further action to be taken.

3. Copy of letter dated 23rd September 1926, from the Director, The Bangalore Woollen, Cotton and Silk Mills, Co., Ltd., Bangalore City, to the Municipal Commissioner, Bangalore City.

We have the honor to acknowledge receipt of your No. T. dated 21.9.26 of the 18th instant for which we thank you.

We shall be very pleased to hear further from you as you have obtained the views of your Sanitary and Engineering departments in regard to the existing proposals which may be reconsidered or deferred.

We note you intend to write us further in regard to the scheme which we have asked. We believe however, that you only refer to its bearing on the extension of your own sewer pipe line.

Sir

With reference to the correspondence ending with your letter No 28 dated the 1st/2nd November 1926 in the matter of the disposal of the sewage of the Municipality and that of the Binny Mills near Kempapur Agrahar and Hosahalli village, I am directed to forward herewith a copy of the notes of the Joint Inspection by the Sanitary Commissioner and the Chief Engineer in the matter and to state that the authorities of the Binny Mills may be requested to take steps early to bring their scheme into operation. If the Municipal Council consider it advisable a time limit may be fixed so that remedial steps may not be unduly delayed.

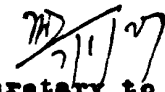

I am also to request you to be so good as to submit at a very early date an estimate with necessary plans for the construction of a settling tank for dealing with the City Sewage as suggested by the Sanitary Commissioner and the Chief Engineer in their joint note.

The matter may kindly be treated as urgent.

NOTES OF JOINT INSPECTION

Accompanied by the Health Officer, Bangalore City we inspected the proposed out-fall to treat the sewage and trade waste of the Binny Mills. Mr. Nuttall the Managing Director and Mr. Street the Mills Engineer were also present.

The Mill authorities do not like the idea of joining with the Municipality in having one common sewage disposal works. They say that it may lead to complications later on as there is no guarantee that the quantity as well as the quality of the sewage now coming from the City will remain stable. Later on, the quantity may increase and the quality also may vary if any trade waste were added. The sewage and trade waste now coming to the Mill out-fall is definitely known and its treatment therefore will continue to be constant. Their arguments have thus some force behind them. Further their projected arrangements to purify the sewage and trade waste are very elaborate and naturally, if the sewage to be dealt with happens to be increased, the working expenses will increase in proportion. As against this, we have to consider the fact that the City sewage by itself needs little elaborate treatment. It can be dealt with very simply by settlement and subsequent treatment on land. The sewage that comes from the Mills on the other hand is a complex mixture of wool-waste, dye-wash which requires - firstly chemical treatment, secondly settlement and thirdly - filtration. If after such treatment the effluent is satisfactory, the Mill authorities intend pumping it back to the tank. If not satisfactory it will be further treated on land, - which should

be quite effective. The estimated cost of the whole project is about one lac of rupees. If trade is in a flourishing condition they expect to complete the whole work within 12 months other-wise it may drag on to 2 or 3 years. The cost of treating the Mill sewage is estimated to be P 3 per 1000 gallons but they are experimenting to reduce this cost, if possible.

We consider that the contention of the Mill authorities is sound and it would be to the interest of all concerned to have separate out-fall works. There is yet another reason why the City Municipality should have separate works. If the City sewage scheme is taken up later on, it is just possible that the sewage now coming to the out-fall may be diverted to the Sunkal tank out-fall. All that is necessary now, so far as the City sewage alone is concerned, is to provide a settling tank to get a clear effluent, the use of which may be leased out to the gardens.

Coming now to the fundamental problem of the prevention of malaria in the neighbouring villages, we fear that the main local factor in the causation of the disease has been over-looked, - perhaps because it is so obvious. We refer to the Railway embankment through which water from the Mill tank percolates into the village lands, forming numerous pools all over. This being so, the remedy will clearly have to be on lines quite different from those now under consideration. We might even say that the gardens are not an unmixed evil, as they use up a large proportion of the seepage water which otherwise would have increased the number of pools and consequently the incidence of malaria. It appears to us that we have to look to sub-soil drainage for effective reduction of existing conditions, so

as malaria is concerned

Jy

To,

Colonel His Highness Sir Sri Krishna Raja Wodeyar, Bahadur,

G C S I , G. B E ,

Maharaja Of Mysore, LYSORE.

May it please your hihness,

We, the undersigned, inhabitants of Kemapayura Agrahar situated about 100 yards from the Binny Mills premisis, humbly and respectfully beg, to bring the following few lines to your kind and favourable consideration -

1 The Bangalore City Municipal Sewage and the Binny Mills drainage pass by the side of the said village The Municipality had auctioned the above sewage and colour drainage to one or two garden owners of the village As a consequence there of the climate of the village has become unhealthy and the people are often subjected to seriously labour under the effects of Malarial Etc , feavers, enlargement of Spleen etc , diseases and some have left the village for this reason To add to this animals also are suffering from various kinds of diseases by sticking up to the drinking of this dirty water

2 There are only three wells in the village and the water in these wells too has become changed in colour There has been a great scarcity of water keenly and acutely felt

3 We have submitted several petitions to the Dewah Shasb , the Municipall Commissioner, Bangalore City Municipal council, The Deputy Commissioner, Bangalore District and the Government and none of which has till now been favourably viewed and our grievances redressed (Copy of the order is enclosed)

4 The Tempals in the village are not at all having the daily worship Owing to scarcity of water and the anxiety felt by us all is inexplicable and indescreibale in writing

5 There are Bangulows belonging to the Binny Mills and occupied by the Mill Officers and these bangalows are given P1 pc connections

6 Our repeated requests for sanction to lay out pipes have all been futile About fifty yards only our residential quarters are situated and we pray that pipe connection be kindly caused to be given to us

7 We most humbly and respectfully pray that Your Highness will be graciously pleased to visit our Agrahar and after hearing our untold miserable grievances to relieve us from our anxiety by affording us complete relief at your Highness's Hands

With fervent hopes that our humble prayers will reach Your Highness's benign Consideration

We Remain,

Your's Highness's Most humble servants

Copy of Government Order No L. 5032-4/ ML 12-24-107
dated 12th January 1926

***** ***

The residents of Kempapura Agrhar presented several petitions to Government complaining that the Bangalore City Municipal sewage and colour drainage of the Binny Mills pass by the side of their village, that the municipality has auctioned the sewage to one or two garden owners of the village, that as a consequence thereof the climate of the village has become very unhealthy, and that the people are oft subjected to malarial and other fevers and enlargement of spleen. They further state that there are only 3 or 4 wells in the village and that, as the water thereof has been coloured, there is scarcity for drinking water and that the village may therefore be given pipe connection.

The villagers of Hossahalli also made a similar complaint.

Thereupon the Deputy Commissioner, Bangalore District, and the Municipal Commissioner, Bangalore City Municipality were requested to submit a detailed report in the matter separately after personal inspections of the localities.

The Deputy Commissioner, Bangalore District after his inspection of both Kempapura and Hossahalli Villages on the morning of the 11th July 1925 with the Revenue Sub division Officer, Amildar, Municipal engineer and the Public works Sub Division Officer, has reported that the village of Kempapura has suffered from the City sewage and also from the industrial sewage of Binny Mills, that as the industrial sewage is said to be far more injurious and more in quantity than the city Drainage, the Municipal Council are for providing an iron pipe to carry off the combined sewage of the city and the Mills, that they have asked the Mill authorities to pay two-thirds of the cost of laying iron pipes. As regards Hossahalli village, it was reported that the Binny Mills have recently enlarged their Bleaching Department and have employed 600 operatives more than before, that in consequence there is a greater flow of industrial sewage which goes further

than the village site of Kempapura and spreads over the tank bed and lands of Hossahalli village, thereby rendering the land unfertile and causing danger to cattle which are likely to drink the harmful water while grazing. As a remedial measure the Deputy Commissioner has suggested that the Municipal Council should enforce the Mill authorities to have a chemical plant in their premises to render the sewage innocuous before letting it out of the premises.

As regards water supply, the Deputy Commissioner states that the Public tap in the Municipal limits of the City nearest to the village may be given by the Municipality for Kempapura and for Hossahalli. The tank in the village is likely to serve the purpose, if the proposals of the Municipal Council for laying iron pipe line and the construction of a septic tank for removing the sewage are carried out and the Chemical plant recommended is installed by the Binny Mills.

After a careful consideration of the matter, Government are pleased to sanction the laying of an iron pipe to carry off the combined Municipal and Industrial sewage at a cost of Rs 10,000 and that the cost thereof be borne in the proportion of two-thirds and one-third by the Binny Mill authorities and the City Municipal Council, Bangalore, respectively, as agreed to by them. The work should be taken on hand at once and completed at a very early date.

Government are also pleased to direct that steps should be taken for the prevention of the use of sewage water for cultivation under the Agrahar tank and for affording water supply facilities to the Village.

Mirza M Ismail Esq , C.I.E , O.B.E.,

Dewan Of Mysore, Bangalore

Most Honoured Sir,

We the inhabitants of Kempapura Agrahar, Hosahalli Jodi villages situated by the side of the Binny Hills Bangalore City most humbly and loyally beg to place the following grievances for your honours kind and sympathetic considerations and early favourable orders -

The municipal main drain that is passing through our villages carrying all the accumulated drain water from the Bangalore City and the poisonous water from the Binny hills is now causing the villages most unhealthy and miserable

We have been representing this fact from the 30th July 1920 Though the Government of His Highness the Maharaja was pleased to issue an order (Copy of Government order No L 5032-4/-M.L.12-24-107 dated 12th January 1926) for removing the hardship, nothing has been done in the matter yet by the Municipal authorities

We earnestly pray the your honour will at least be pleased to come to our aid and thus help us from panic by giving us health and happiness

For which act of Benevolent charity on your honours part, we shall ever remain grateful

We beg to Remain,
Most honoured Sir,
Your most obedient Servants

Bangalore

17th August 1923.

Sir,

N. Madhava Rao Esq., B.A., B.L.,
Chief Secretary to the Government of
His Highness the Maharaja of Mysore,
Bangalore

With reference to correspondence ending with this office letter No A 1 - 290/26-27 dated 13th March 1928 regarding the treatment of Aralepet and Binny Mills sewage, I have the honor to state that the question has been engaging the serious attention of the Municipal Council for a long time past. The locality was inspected several times by me in conjunction with the Health, Sanitary and Engineering Officers of the Government and the Municipality. A definite scheme acceptable to the mill authorities and the Government and Municipal authorities was drawn up and placed before the Council on 9th November 1927. A copy of my note dated 9th November 1927 is submitted for the information and orders of Government. The Council at the meeting held on 12-12-1927 referred the subject to the Health Committee for opinion. The Health Committee on 5-1-1928 recommended that the Binny Mill authorities be given permission to install their own purification plant on the conditions referred to in my note dated 9th November 1927. A copy of the opinion of the Health Committee dated 5th January 1928 is also put up for information of Government.

2 The whole subject again came up before the Municipal Council on 11-4-1928 and the Council have approved of the proposal contained in my note dated 9th November 1927. A copy of the resolution of the Council is submitted for the information of Government.

- 2 -

3 The Council have accorded their administrative approval to allow the Binny Mill authorities to instal their own purification plant and to the construction septic tank by the Municipality for treating the Arels sewage at a cost of Rs 3,000/-

I have the honor to be,

Sir,

Your most obedient servant,

Phorru Cadaw

~~Municipal Commission~~

Forwarded with compliments

McKinnell & Co

President

**City Municipal Office,
Bangalore, 9th November 1927.**

N o t e.

The insanitary condition of the Agrahar tank abutting on Binny Mills and its vicinity was being pressed upon the attention of the Municipality by the public, press and residents of Kempapur Agrahar for some time past. The locality was inspected by the Executive, Health, Sanitary and Engineering Officers of the Municipality and Government. Out of several proposals formulated from time to time, a scheme acceptable to the Mill authorities and the Government and Municipal authorities has been prepared and the same is placed before the Municipal Council for consideration.

2. The scheme provides for

- a) Purification and disposal of trade waste and sewage of the mills.
- b) Purification and disposal of the Municipal sewage from the Arlepet area.
- c) Disposal of waste and sullage water coming from Cheluvadipalya and New Pensioners' lines.
- d) Improvement to the land below the tank bund and the Railway embankment so as to minimize the dampness and the mosquito breeding pools and puddles.

3. Purification and disposal of the Mills trade waste and sewage.

The Binny Mill authorities propose erecting their own purification works for treating their purification works for treating their effluents and sewage. The cost will be borne by them. They have applied for a license. The Chief Engineer and Sanitary Commissioner to Government recommend the grant of the license applied for by the Mill authorities. The effluent so obtained will, it is stated, be readily applied to land directly for cultivation ~~purified~~ and used up. There will be no smell or nuisance. The contamination of wells and sub soil water will be ~~not~~ avoided.

4. The proposal of the Mill authorities was further re-examined at the instance of Government by the Deputy Sanitary Commissioner, Town Planning Officer and Municipal Commissioner. It was agreed that the Mill authorities be permitted to instal their own purification plant for dealing with trade waste and mill sewage. The question of permitting the mill authorities to pump the purified effluent back into the Agrahar tank be kept open for the present. I think that the Council may accept this view.

5 Treatment of Municipal sewage of Arlepet

It is proposed to construct a septic tank by the Municipality at a cost of Rs 2,800 or Rs 3,000/- in round figures. The Chief Engineer and the Town Planning Officer have approved of this scheme. These officers have offered a slight alteration in the design and it will be adopted. This estimate may be sanctioned.

6 Treatment of sewage of Cheluvadipalya and New Pensioner's lines

The Health Officer has submitted certain proposals in this behalf on 27th October 1927. His proposals will be examined and placed before the Council in due course.

7 Improvement and Levelling of lands below the Railway embankment

This is a big question involving the acquisition of valuable garden lands. This matter may lie over for the present as it is expected that the treatment of trade waste and sewage referred to in paras 3,4 and 5 supra will go far towards minimizing the noxious smell experienced in this locality.

8 The Council may, in the meanwhile, accord their administrative approval to,

1) allowing the Binny Mill authorities to instal their own purification plant, the question of repumping the purified ~~fluid~~ fluid back into the tank being sympathetically considered if it is found wholesome by the Government and Municipal Health Departments.

- 3 -

11) Construction of septic tank by the Municipality for treating the Arlepet sewage
